

RECOMMENDATIONS

1. Focus on Kurtosis Integrated Profile
2. Focus on Standard Deviation DM-NSR Curve
3. Closer analysis of what this means and if other celestial objects producing cosmic rays show the same attributes.

FUTURE WORK

Improving the model, trying other ways of scaling, balancing class weights.

Looking at stars right before they die - predicting whether or not it will become a pulsar or not (could be slightly impossible considering stars live for billions of years...)
